

Physician Software Systems User Interface

Physician Software Systems develops an innovative approach to managing the anemia experienced by patients undergoing hemodialysis. Physician Software Systems was formed to commercialize a world-renowned medical education and research institution's innovative approach to managing the anemia experienced by patients undergoing hemodialysis.

The institution's advanced software system helps to manage individualized patient dosing of Erythropoietic Stimulating Agents. It lowers the risk of hemoglobin cycling side effects such as anemia, weakness, increased risk of thrombosis, stroke, and cardiovascular morbidity and mortality. ThinkPiece Creative provided design consultation for User Interface and User Experience. Physician Software Systems and ThinkPiece Creative worked together to build a more intuitive medical tool. Together, Design and Technology are helping to change people's lives.
